Abstract---- *Now a days students are facing problems in getting the jobs after completion of their degree. They are unaware of the different opening in companies of their field. This project will provide platform to such students which are searching the job. They will get information about different jobs through notification and by their senior. Students can save their documents such as mark sheet, leaving certificate etc. They can also contact with their seniors who are already placed in different organization. This project is helpful to access aptitude and technical papers of different companies. This technology will be helpful for companies to search the candidates who have specialization in the required field and they can provide notification to such candidate.*

Keywords- Web technology, Gateway, SQL, User authentication, HTML.

I.   INTRODUCTION

Web technology plays an important Role in life of people who are surviving in this generation to create a great Network. This project will help student to solve their problem. Students can register on the web network according to universities, college and in what courses they are studying. Web Technology Group is a technology consultancy and solutions provider to the UK Public Sector, specializing in the design, build and management of secure, high value and complex web applications, based in London, UK.

This Web application is named as **Student Dispute Quick Fix Gateway** which is for solving the problems faced by student in their day to day life . Firstly this application and the website is for students and organizations. For accessing the application, students and organizations have to register through the website using the particular id and password given to them. From website the Students have the facilities of editing the profile, changing password. Students can upload the personal document and marksheet of of their particular class with name of the document . The file which is to be uploaded should be in jpeg file and it may be the docx file for the resume purpose.

Suppose in case the Students forget its password, he/she can recover it by giving their email id, which they themselves had filled during the registration process. Website coding is done in .Net and back end is Microsoft SQL server database. In the web application, Student can login through his/her personal email id and can upload their documents and can access their uploaded document whenever needed. Students have the facility of changing the password and grab the job opportunity.

There are three panel in this web application. 1) Admin panel 2)Organization Panel 3)Student Panel. Admin has authorized person who can add the organization into the web portal after authorizing the organization. Admin can check the list of organization tied up with our portal. Admin has the authority to post the new event which is available to the registered students on the website. After adding the particular organization, password is generated for the organization, with the help of email id and generated password in the admin panel, organization can login into the website. In the organization panel, organization can post the job for the student as per their branch. Registered student with particular branch can have access to the job through the student panel. Student has the facility of saving the important document into the website and they can access the document any where any time whenever they required. Student can contact with their senior and classmates through this portal. Student can share their document as per their wish. Student may have access to the previous year question paper of their university. In this way student can make their task easier.

II.   PROBLEM DEFINITION

System Analysis is the detailed study of the various operations performed by the system and their relationships within and outside the system. Analysis is the process of breaking something into its parts so that the whole may be understood. System analysis is concerned with becoming aware of the problem, identifying the relevant and most decisional variables, analyzing and synthesizing the various factors and determining an optional or at least a satisfactory solution. During this a problem is identified, alternate system solutions are studied and recommendations are made about committing the resources used to the system.

Now a days students are facing problems in getting the jobs after completion of their   degree. They are unaware of the different opening in companies of their field. This project will provide platform to such students which are searching the job. They will get information about different jobs through notification and by their senior.Students can save their documents such as marksheet, leaving certificate etc.They can also contact with their seniors who are already place in different organization.This project is helpful to access aptitude and technical papers of different companies.This technology will be helpful for companies to search the candidates who have specialization in the required field and they can provide notification to such candidates. This project is based on .net technology.

III.   SYSTEM ARCHITECTURE

After login there are four modules by which they can make their world easy.

System Architecture

3.1. Save your document:-

Student can upload their document in their profile and they can access as per their need for example you are in the college and you need a mark sheet that you forgot at that time you can easily access from your profile. You can also share your document with your friends. Student can share notes and seminar topics etc. with their friends. My Documents is the commonly recognized name of a special Folder in Microsoft Windows, allocated to help users store their personal data files. The actual name of the folder might be different, depending on the version or language of the installed copy of Windows.

### 3.2. Aptitude and Technical papers:-

This section of project will test student abilities in Quantitative Aptitude. So before appear for this career test, students must well versed on the topic of Quantitative Aptitude. Technical knowledge is an integral part of recruitment process. So in this section student can improve their technical knowledge.
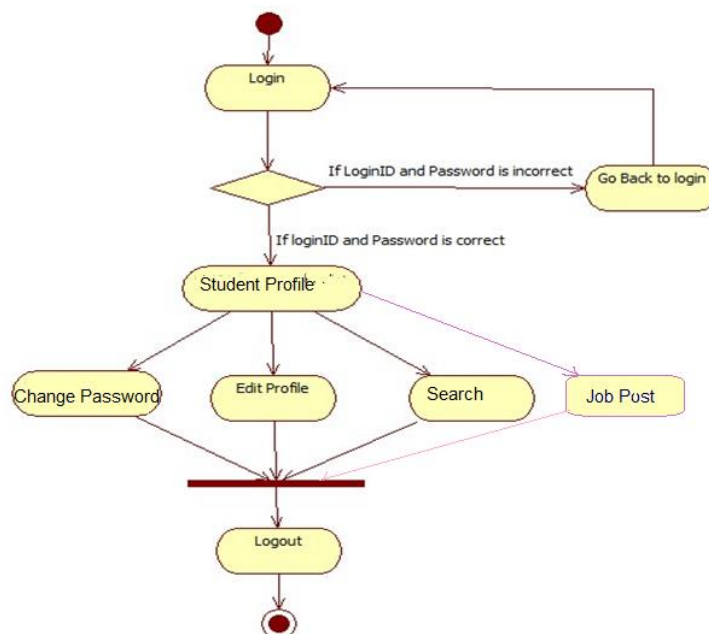

3.3. Contact with senior:-

It would be easy to contact with your senior as per registered university or colleges and courses in which they are studying.
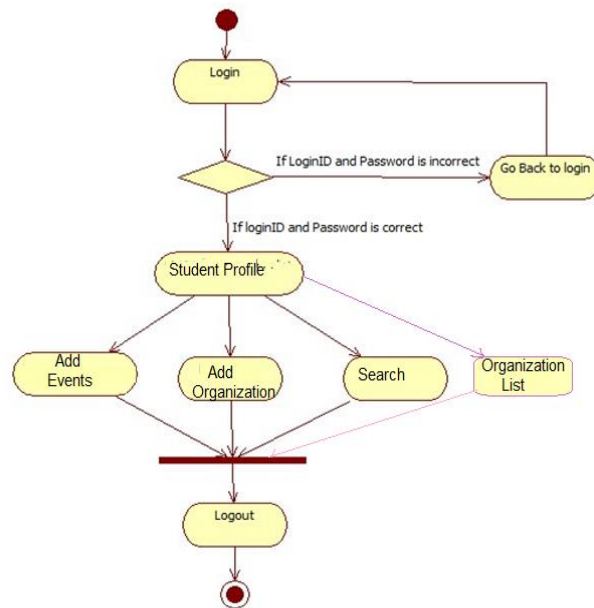

3.4. Resume:-

Resume is a document used by a person to present their backgrounds and skills. It can be used for variety of reasons , but most often they are used to secure new employment. This technology will be helpful for companies to search the candidates who have specialization in the required field and they can provide notification to such candidates.

Activity Diagram for Student

Activity Diagram for Organization

Activity Diagram for Admin

IV. CONCLUSION

This system reduce the huge paper work .Student Life Will be In the Comfortable zone with the help of this system .This system save the valuable time of the student. Student dispute Quick fix Gateway   is the Best platform for hiring process. Make the student task in simple and efficient manner. Student dispute Quick fix Gateway   is the best solution for the student to get the job. Student dispute Quick fix Gateway   is also best solution for the organization from recruitment point of view.
